

Assignment Web Services

The Govt of India has shared with your company the confidential database of PinCode wise Population with male female breakup.

Create a Web Service to provide this information to any company who needs it. Your company will be charging a fee for anyone who needs access to the Web Service.

Web Service

1. Web Methods
 - a. PopulationInfo GetCategoryWisePopulationForPinCode (string pinCode)
Note: return random numbers for the purpose of this assignment.
2. Models
 - a. class PopulationInfo

```
{  
    string PinCode {get; set;}  
    long MaleCount {get; set;}  
    long FemaleCount {get; set;}  
    long ChildrenCount {get; set;}  
}
```

Web Service Consumer

Create a Controller & View to accept the pinCode as a parameter and display the Population info in a div. See example below.

Worldline Population Information

Enter the PinCode: [View population Information](#)

Thank you for your interest in our population services

The total population in PinCode 12345678 is 5,343,324

Male	Female	Child
34,343	33,434	14,343
